For more information on electromagnetic immunity and electromagnetic emissions see: www.mypico.com or ask your Smith & Nephew representative for a hardcopy.
7. Adverse Reactions
Excessive bleeding is a serious risk associated with the application of suction to wounds which may result in death or serious injury. Careful patient selection, in view of the above stated contraindications, warnings and precautions is essential. Carefully monitor the wound and dress for any evidence of a change in the blood loss status of the patient. Notify the healthcare professional of any sudden or abrupt changes in the volume or the color of exudate.

8. Instructions for use
8.1. Guidance on wound suitability
PICO dressings should be used on wounds which fit comfortably within the area of the pad, observing precautions on soft port positioning on intact skin, and not extending over the wound. PICO Multisite dressings are designed to enhance conformability when dressing awkward anatomical areas. Each PICO dressing (including Multisite) must be used to dress one wound only. As a guide:

- Depth: Wounds greater than 0.5 cm (1/4 in) in depth are likely to require a foam or gauze negative pressure wound therapy filler to ensure adequate treatment of all the wound surfaces. Wounds treated with the larger dressing sizes of the PICO 7 system should generally be no more than 2 cm (7/8 in) in depth.

- Exudate: PICO is intended for use on wounds where the level of exudate is low (up to 0.6 g of liquid exudate/cm² of wound area/24 hours) to moderate (up to 1.1 g of liquid exudate/cm² of wound area/24 hours) of the dressing to prevent fluid pooling around the soft port and blocking the therapy. Remove the other remaining handled and smooth the dressing around the wound to prevent creasing. Reposition if required to ensure border is not creased.

- Predicted therapy time: The PICO 7 pump contains a MAGNET. Keep the PICO 7 pump at least 4 inches (10 cm) away from other medical devices that could be affected by magnetic interference. See Section 5 Magnetic Warning.

2. Remove the pump from the dressing by untwisting the connectors.
3. Once the dressing is in place, remove the pump and the batteries from the tray.
4. The direction in which the batteries should be placed is indicated inside the battery compartment. Insert all batteries. Replace the cover. Following this all four indicators should illuminate for 3 seconds.
5. Join the pump to the dressing tubes by twisting together the connectors. The soft tube can be directly connected to the pump if long tubing is not required.
6. Press the orange button to start the application of therapy. For any information or troubleshooting refer to the respective PICO system user manual.
7. If using NO-STING SK-PREP prior to application of the dressing, wipe the area surrounding the dressing and allow skin to dry.
8. Apply the strips all the way around the dressing border. Remove top carrier on the strip after each one has been applied. These strips maintain the seal over the wear time of the dressing. In awkward areas, it may be useful to apply the strips to help achieve a seal prior to switching on the pump. Place each strip so that it overlaps the dressing border by approximately 1 cm (1/2 in). Ensure tubing is not twisted or trapped between clothing.

9. Showering and bathing
Light showering is permissible; however, the PICO pump should be disconnected (see Section 6. Precautions) and placed in a safe location that will not interfere with defibrillation. If in the event that defibrillation is required, remove the dressing and pump if it is positioned in a location that will interfere with defibrillation. PICO dressings are MRI compatible, however, PICO pump is not MRI compatible. PICO dressings are not compatible with hyperbaric oxygen (HBO).

10. General use
During use of your PICO dressing, for any information or troubleshooting on your pump refer to the respective PICO system user manual.

11. PICO dressing compatibility with other diagnostic procedures
PICO pumps and PICO dressings are compatible with defibrillation. If in the event that defibrillation is required, remove the dressing and pump if it is positioned in a location that will interfere with defibrillation. PICO dressings are MRI compatible, however, PICO pump is not MRI compatible. PICO dressings are not compatible with hyperbaric oxygen (HBO).

- For compatibility information for the PICO pump, refer to the respective PICO system user manual.

12. Cautions
This user manual is not intended as a guarantee or warranty. It is intended only as a guide. For medical questions please consult a physician.

The product must be used in accordance with this user manual and all applicable labeling.

PICO is packed in the UK with individual components being used in the following countries: Dressing – UK.

- Fixation strips – Origin as marked.
- Smith & Nephew Medical Limited, 100 Hessle Road, Hull, HU5 2BN England
- Trade Marks of Smith & Nephew
- www.smith-nephew.com
- ©Smith & Nephew
- This product may be covered by one or more US patents. See www.smith-nephew.com/patents
- Date of issue 03/2018

13. System variants
PICO Fluid Management Pack for use with PICO Single Use Negative Pressure Wound Therapy Systems

For use with PICO Single Use Negative Pressure Wound Therapy Systems

7x individually packaged dressings, secondary fixation strips

14. Glossary of symbols
- Warning: The PICO 7 pump contains a MAGNET. Keep the PICO 7 pump at least 4 inches (10 cm) away from other medical devices that could be affected by magnetic interference. See Section 5 Magnetic Warning.
- Caution: Federal (USA) law restricts this device to sale by or on order of a physician.
- Single Use. Do not reuse.
- EU: Not for general waste.
- Do not use if the package is damaged.
- This product is sterilised by Ethylene Oxide.
- Storage temperature: 2°C to 8°C
- Expiry date.
- Manufacturer.
- Date of manufacture.
- Consult instructions for use.
- Keep product out of sunlight.
- Keep dry.
- Lot number.
- CE Mark.

15. Instructions for use
8.2. Application
The dressing should only be applied by a healthcare professional.

1. Remove any excess hair to ensure close approximation of the dressing to the wound. If necessary, irrigate the wound with sterile saline and pat the wound dry.
2. Using a clean technique, peel off the first release handle and place the dressing centrally over the wound to reduce the chance of wound fluid coming into contact with the soft port. Ensure the dressing lies flat to the wound and the surrounding skin. The port should be uppermost from the wound (depending on the patient’s primary position), placed on intact skin and not extending over the wound to prevent fluid pooling around the wound therapy filler to ensure adequate treatment of all the wound surfaces. Wounds treated with the larger dressing sizes of the PICO 7 system should generally be no more than 2 cm (7/8 in) in depth.

3. The PICO dressing should be disposed of as clinical waste.
